Complete Accepted : Nov. 11, 1926.

COMPLETE SPECIFICATION.

An Improved Envelope.

I, HENRY FREDERIC BROWN, of 11, Hubert Road, Haydon's Road, South Wimbledon, S.W. 19, in the County of Surrey, Draughtsman, British, do hereby
5 declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

10 My invention relates to envelopes, made of paper or like material, cut, shaped, or made from a blank to outline shape of the drawing shown in Fig. 1. Portions of this shape are folded to form
15 four flaps, top flap, marked, A, A, A, bottom flap, marked, C, & side flaps, marked, D & E.

The folding lines of these four flaps are shown by check-lines, thus leaving
20 formed, central rectangular section, marked, B, Fig. 1.

The portions gummed, of the shape, are shown by hatching; top flap, A, A, A, Fig. 1, marked, A¹, the whole of side flaps D & E, marked, D¹ & E¹. Fig. 1, also
25 shows a position of two of the three perforated lines, by dotted lines on flap, A, A, A; the third perforated line is along the folding line of flap, A, A, A, see
30 Fig. 2, marked, A², A².

Fig. 2, shows top flap, A, A, A, with perforated lines; that marked, A², A², going right across envelope, horizontally, in fold-line of flap; those marked, B¹ &
35 C¹, extending from corners of the edge-recesses of flap, A, A, A, to the cross line marked, A², A², meeting it at centre line-point of envelope, thus forming top flap A, A, A, into three sections, marked E²,
40 F & G. In larger envelopes the lines

marked B¹ & C¹ of perforations do not meet, thus leaving a space between them at the point of contact with the line A², A².

Fig. 3, shows shape of bottom flap, 45 marked, C, having the bottom edge cut away at D² substantially to the depth of the ungummed portion of flap marked, A, A, A.

Fig. 4, shows the result of all the four 50 flaps folded on to the central rectangular section, marked with reference letters & numbers of the different portions & lines of shape in accordance.

To form my complete envelope:—the 55 bottom flap is folded on to the central rectangular section; the side flaps are folded on to the central rectangular section & the bottom flap, to which they are adhered; & the top flap is then folded on
60 to the central rectangular section, partly covering the side flaps, & bottom flap, to which it is adhered.

To open envelope:—the side sections 65 of top flap, marked, E² & G, are torn away.

Having now particularly described & ascertained the nature of my said invention, & in what manner the same is to be performed, I declare that what I 70 claim is:—

An envelope having the top & bottom flaps shaped, & the top flap provided with three lines of perforations, dividing the flap into three sections, substantially as 75 described in reference to the accompanying drawings.

Dated the 11th day of October, 1926.

HENRY FREDERIC BROWN.
